

AMENDMENTS TO THE SPECIFICATION

Page 7, Lines 1-2:

FIG. 2 is a schematic block diagram of a CO₂ incubator of another embodiment showing the flow of air; and

FIG. 3 is a view of the incubator.

Page 12, Lines 16-25

In the case of the CO₂ incubator 20 of this embodiment, as shown in Fig. 3, a body 22 is constituted of an adiabatic housing 70 having an opening (~~not illustrated~~) 72 on one face, the same as the case of the above embodiment. Moreover, a partition wall 22 74 is formed in the inside (storeroom) of the body 22 housing and incubation spaces 1S and 2S divided by the partition wall 21 74, are also formed. Furthermore, the ~~body 22~~ housing is provided with a ~~non-illustrated~~ door 78 for blocking the incubation spaces 1S and 2S, respectively, so that the opening for each of the spaces 1S and 2S can be opened or closed.
